1. Introduction

1.1 Product Description

The CE-6BT01 is a COM Express® form factor module in Compact Size with Type 6 pinout and features the Intel® Atom™ Processor E3800 Series (codename "Bay Trail") in FCBGA1170 package on 22nm process technology in a single chip solution. Two 204-pin SODIMM sockets are for dual channel DDR3L 1333MHz memory with maximum capacity of up to 8GB. The Intel HD graphics controller integrated within the processor supports two independent displays (VGA, DDI, or LVDS).

The CE-6BT01 is based on the COM Express® specification and features a standardized connector layout that carries a specified set of signals. The Type 6 pin-out connectors support DDI/LVDS/VGA, SATA, HD audio, Gigabit Ethernet, PCIe and USB 3.0. This computer-on-module provides the core system functions and requires a carrier board to bring out I/O to form a complete system. To accommodate a variety of OEM/ODM requirements, the COM Express module with a carrier board is the best cost-effective solution and reduces development time.

3. Thermal Solutions

There are two thermal solutions for the CE-6BT01 COM Express Module to dissipate heat. A heat sink or heat spreader can be used, and the procedures for assembling the module with the carrier board for each solution are similar.

3.1 Heat Sink

3.1.1 Dimensions

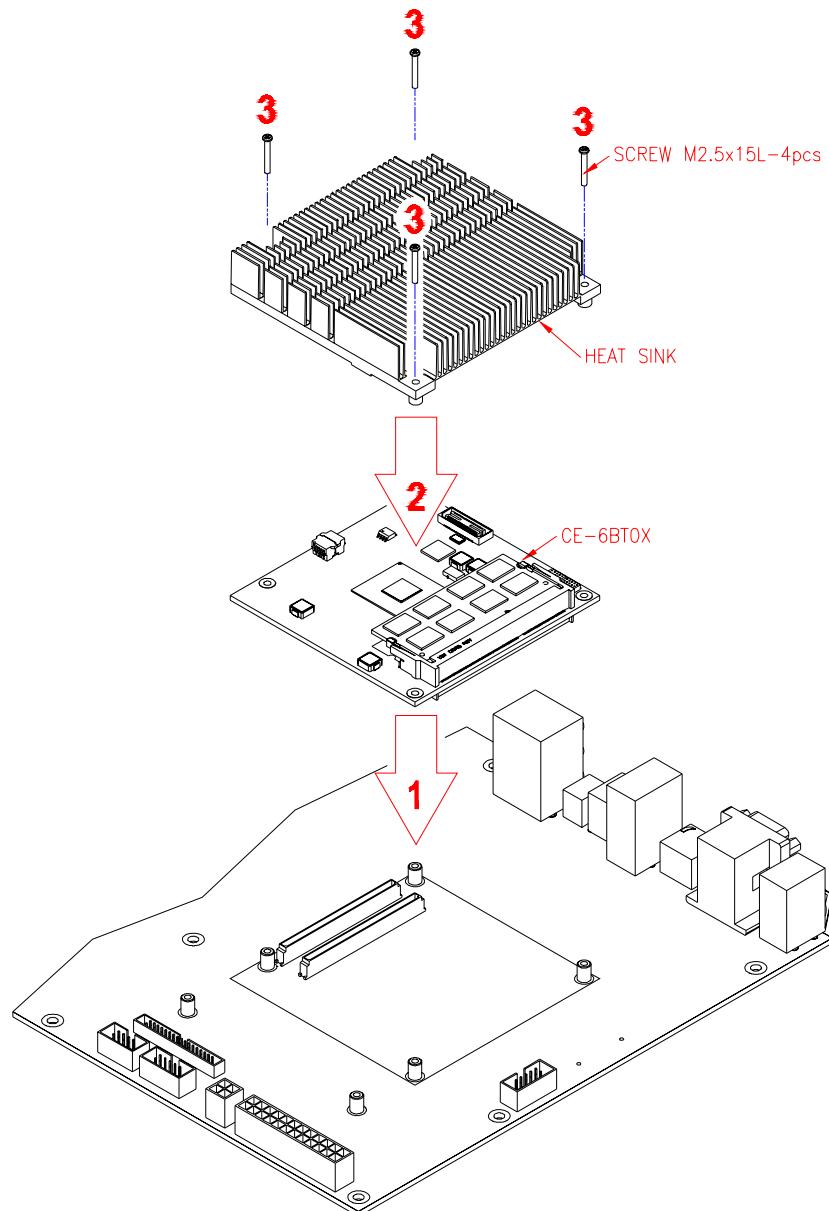

Units: mm

3.1.2 Installation

Step 1: Align the COM Express connectors on the module with the corresponding connectors on the carrier board. Make sure the four holes at the corners of the module line up with the corresponding standoffs on the carrier board. Press down on the module until it is properly seated on the carrier board.

Step 2: Place the fan sink on top of the module.

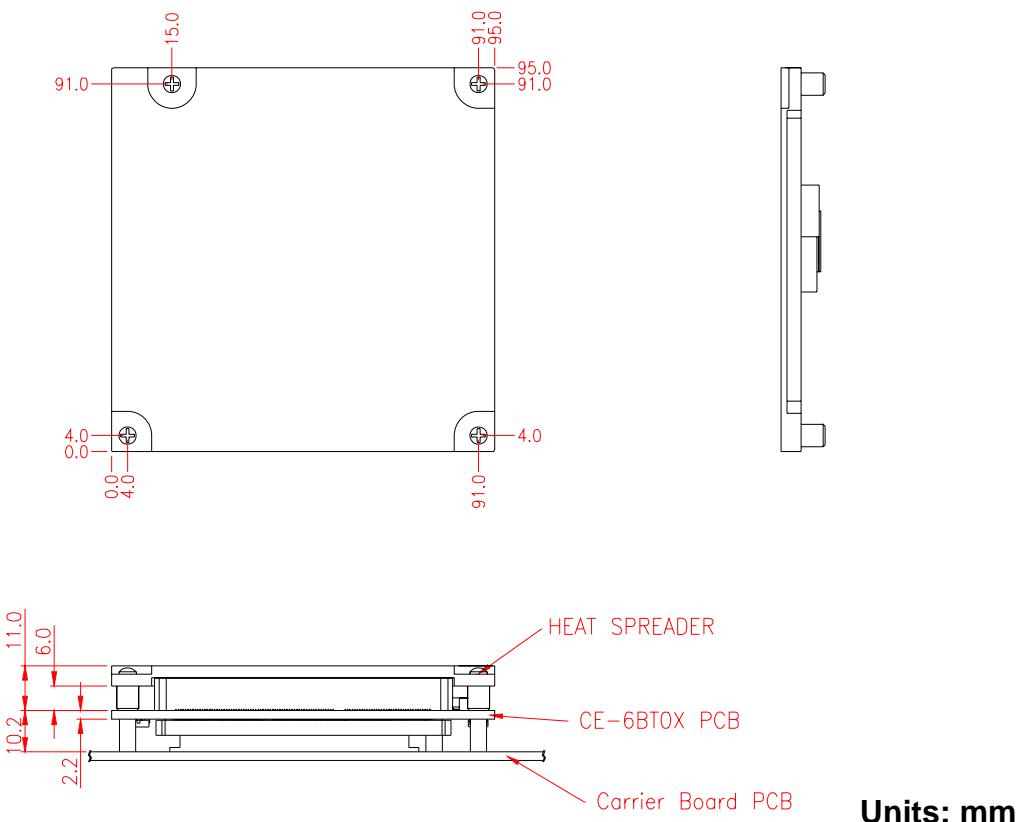

Step 3: Use four screws (M2.5x15L) to secure the fan sink to the carrier board through the corresponding holes on the module.

3.2 Heat Spreader

A heat spreader is designed for the CE-6BT01 to dissipate heat. All heat generating components are thermally connected to the heat spreader in order to avoid hot spots.

3.2.1 Dimensions

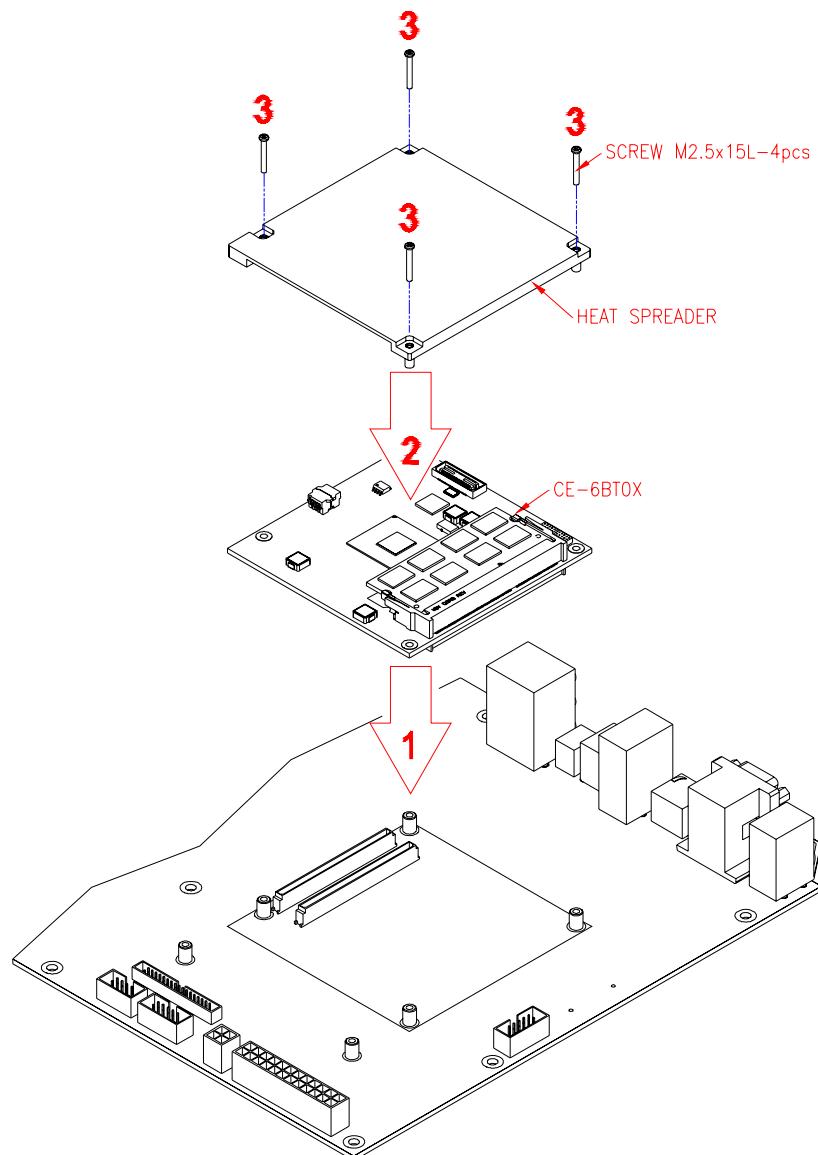

3.2.2 Installation

Step 1: Align the COM Express connectors on the module with the corresponding connectors on the carrier board. Make sure the four holes at the corners of the module line up with the corresponding standoffs on the carrier board. Press down on the module until it is properly seated on the carrier board.

Step 2: Place the heat spreader on top of the module.

Step 3: Use four screws (M2.5x15L) to secure the heat sink with the carrier board through the corresponding holes on the module.

4. Features & Interfaces

4.1 Processor

The CE-6BT01 supports the Intel® Atom™ processor E3800 Series which utilizes 22nm process technology with 3-D Tri-Gate transistors to deliver significant improvement in computational performance and energy-efficiency. Based on a new micro-architecture, the processor is designed for a one-chip platform. 6.3 Security

Administrator's and User's passwords could be set.

If ONLY the Administrator's password is set, then this only limits access to Setup and is only asked for when entering Setup. If ONLY the User's password is set, then this is a power on password and must be entered to boot or enter Setup. In Setup, the user will have administrator rights. The minimum length of the password is 3 and the maximum length is 20.

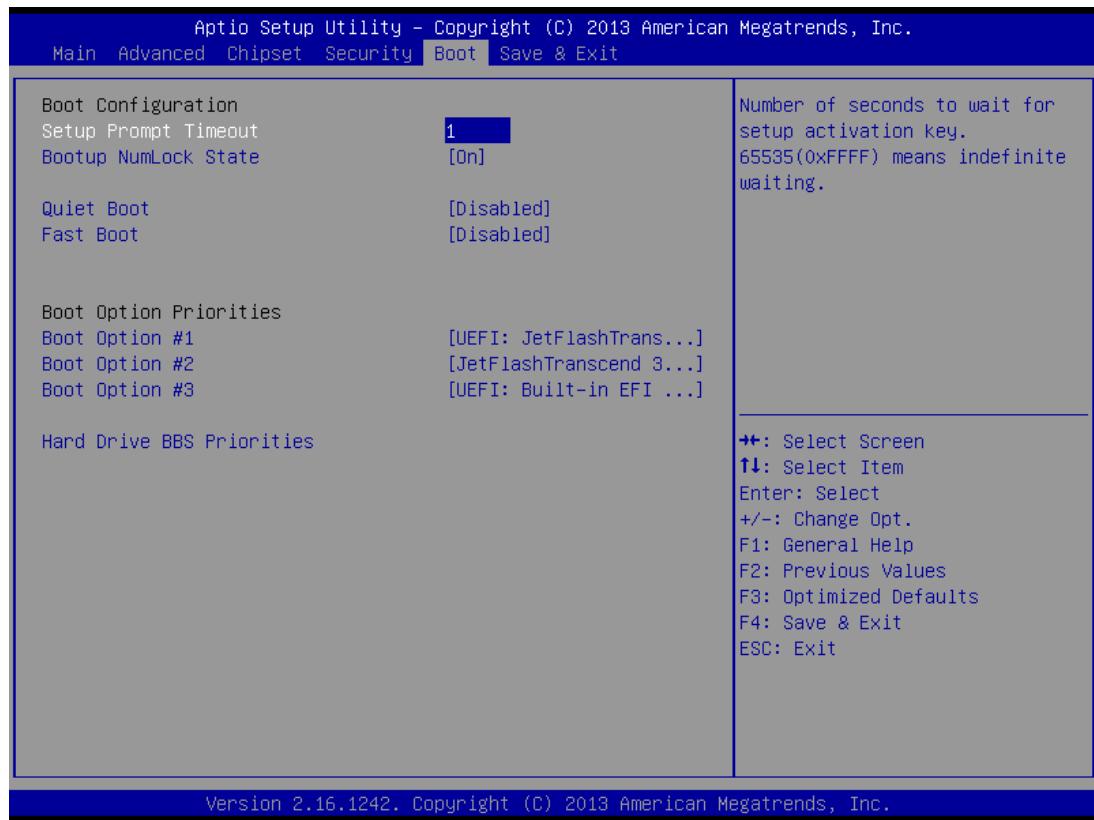

6.3.1 Secure Boot Menu

Secure Boot: Secure Boot can be enabled if the System running in User mode with enrolled Platform Key (PK) and CSM function is disabled.

Secure Boot Mode: Secure Boot mode selector. ‘Custom’ Mode enables users to change Image Execution policy and manage Secure Boot Keys.
