About

This panel displays information about the PenMount controller and driver version.
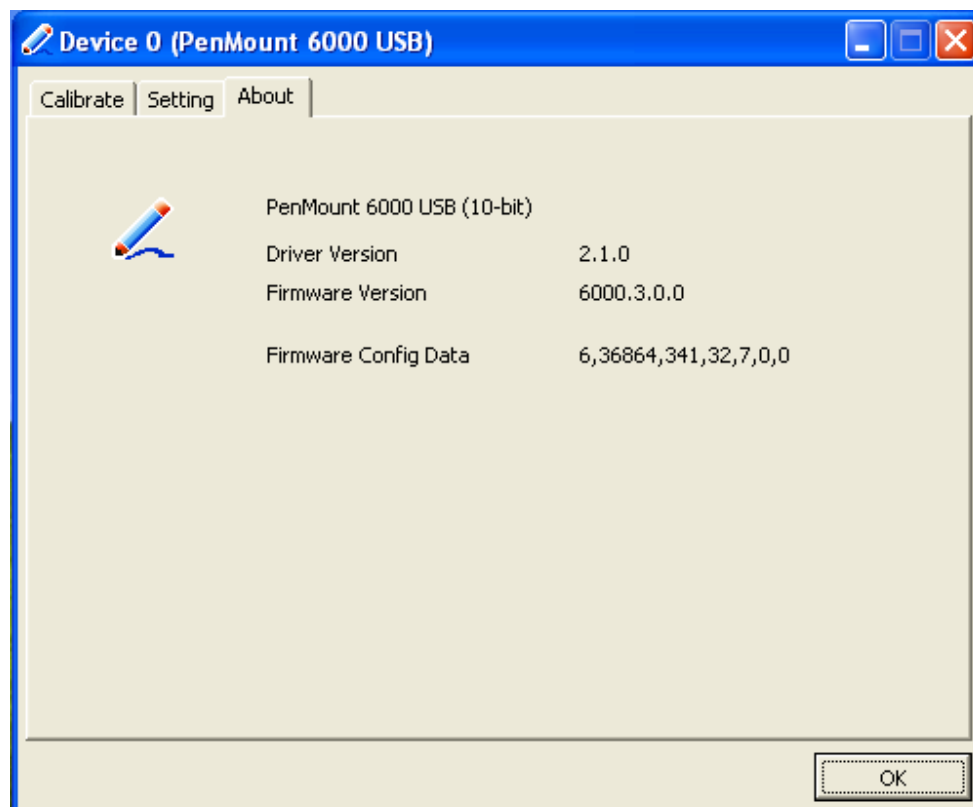

Multiple Monitors

Multiple Monitors support from two to six touch screen displays for one system.

The PenMount drivers for Windows 2000/XP support Multiple Monitors. This function supports from two to six touch screen displays for one system. Each monitor requires its own PenMount touch screen control board, either installed inside the display or in a central unit. The PenMount control boards must be connected to the computer COM ports via the RS-232 interface. Driver installation procedures are the same as for a single monitor. Multiple Monitors support the following modes:

> Windows Extends Monitor Function
> Matrox DualHead Multi-Screen Function
> nVidia nView Function

NOTE: The Multiple Monitor function is for use with multiple displays only. Do not use this function if you have only one touch screen display. Please note once you turn on this function the rotating function is disabled.

Enable the multiple display function as follows:

1. Check the **Enable Multiple Monitor Support** box; then click **Map Touch Screens** to assign touch controllers to displays.

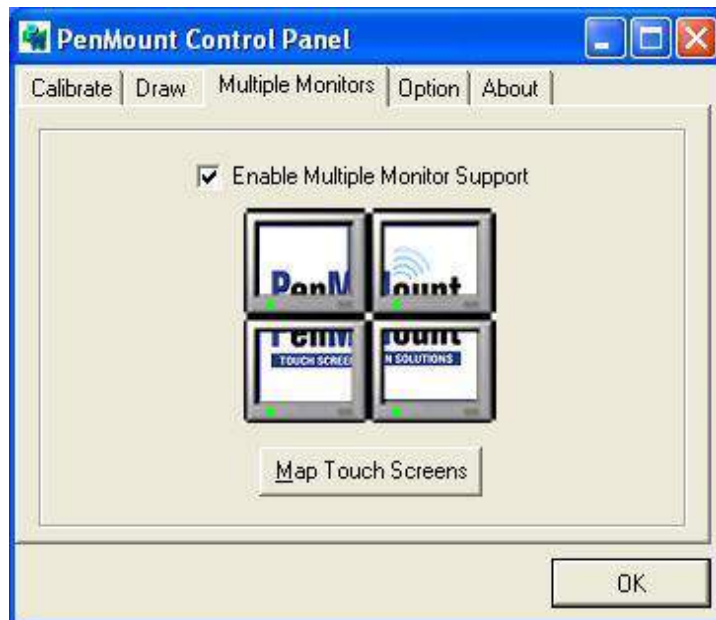

2. When the mapping screen message appears, click OK.
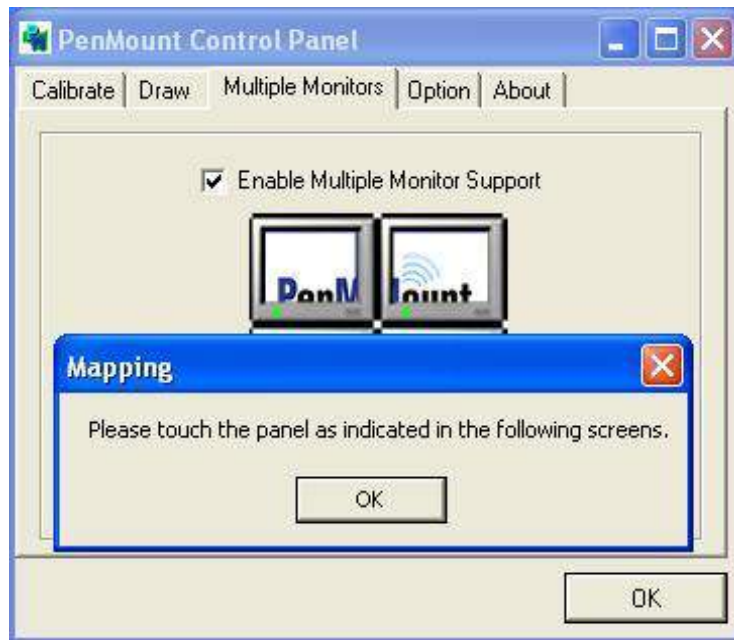

3.   Touch each screen as it displays "Please touch this monitor". Following this
        sequence and touching each screen is called **mapping the touch screens**.
4.   Touching all screens completes the mapping and the desktop reappears on the
        monitors.

5.   Select a display and execute the "Calibration" function. A message to start
        calibration appears. Click OK.
6.   "Touch this screen to start its calibration" appears on one of the screens. Touch
        the screen.

7.   "Touch the red square" messages appear. Touch the red squares in sequence.

8. Continue calibration for each monitor by clicking **Standard Calibration** and touching the red squares.
